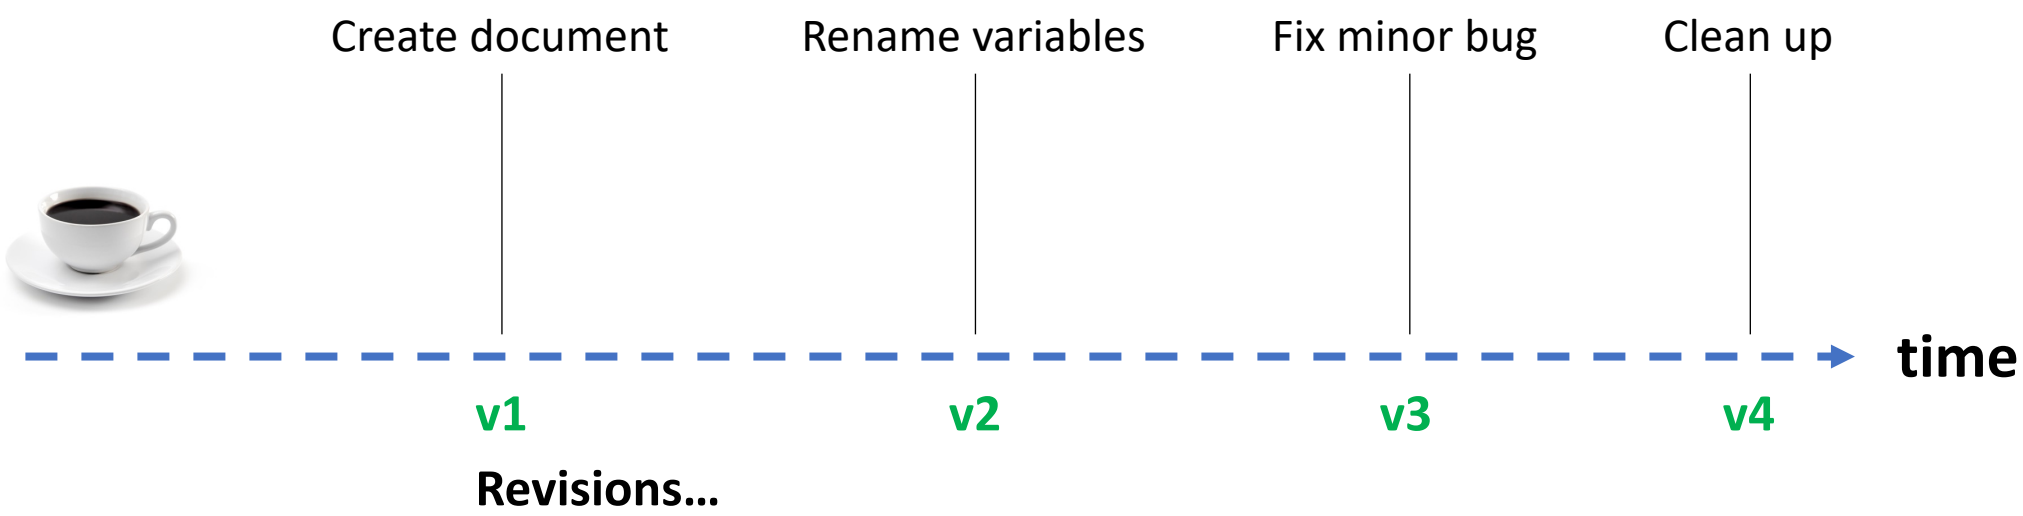
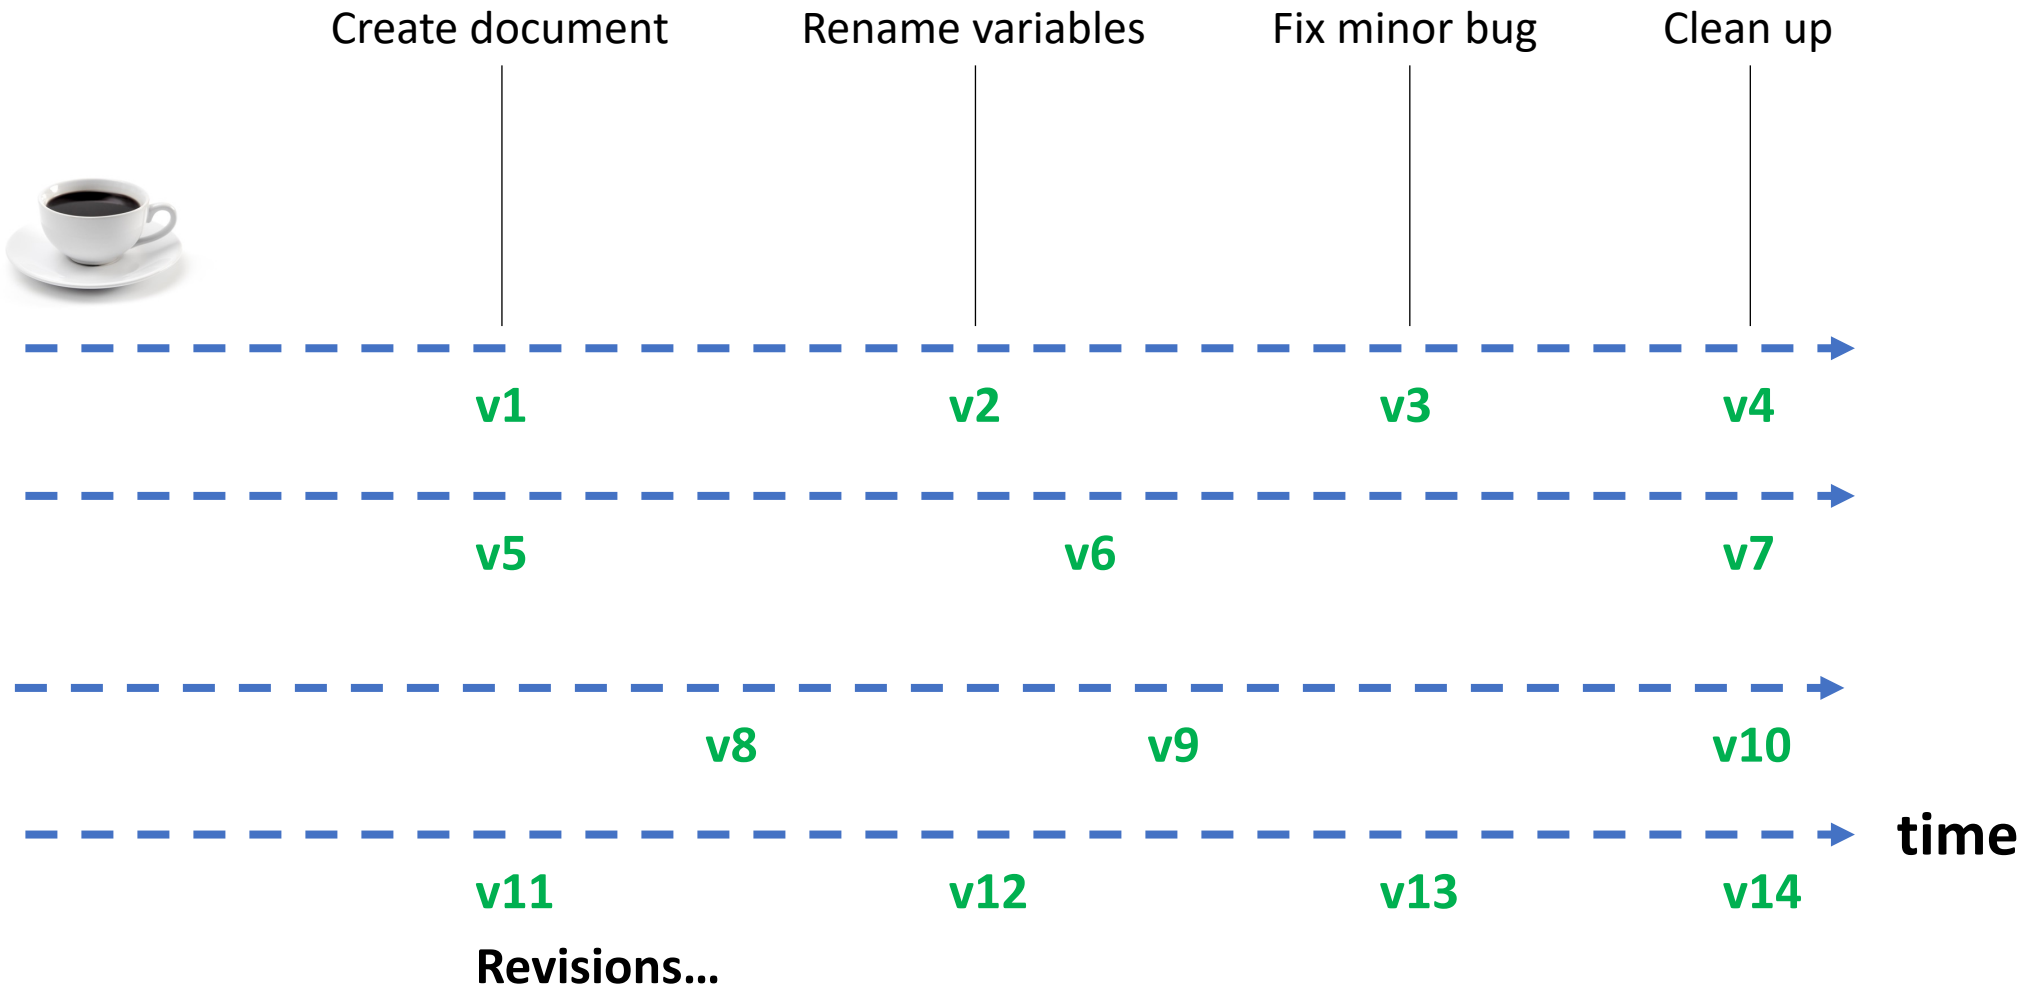
A Day in the Life of a Software Developer

A Day in the Life of a Software Developer

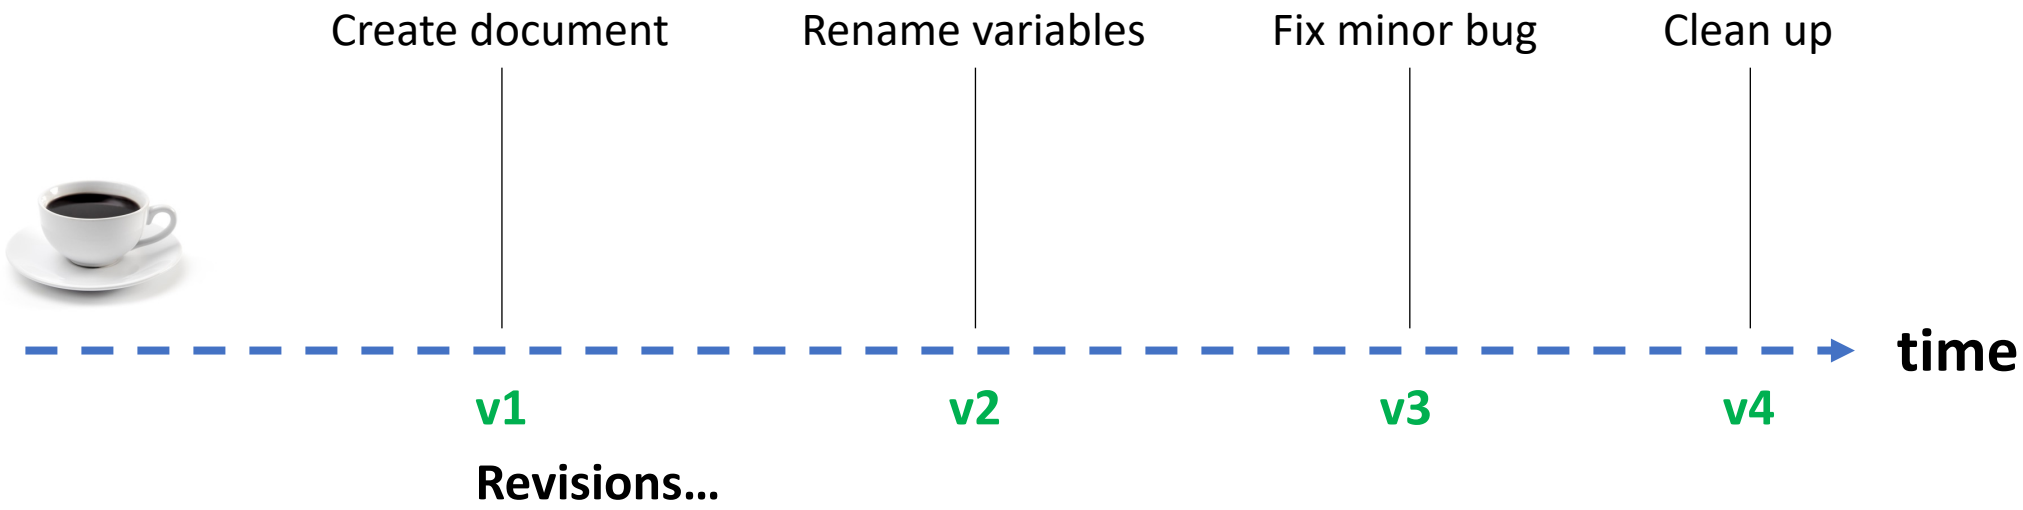
A Day in the Life of a Software Developer



After a few days…



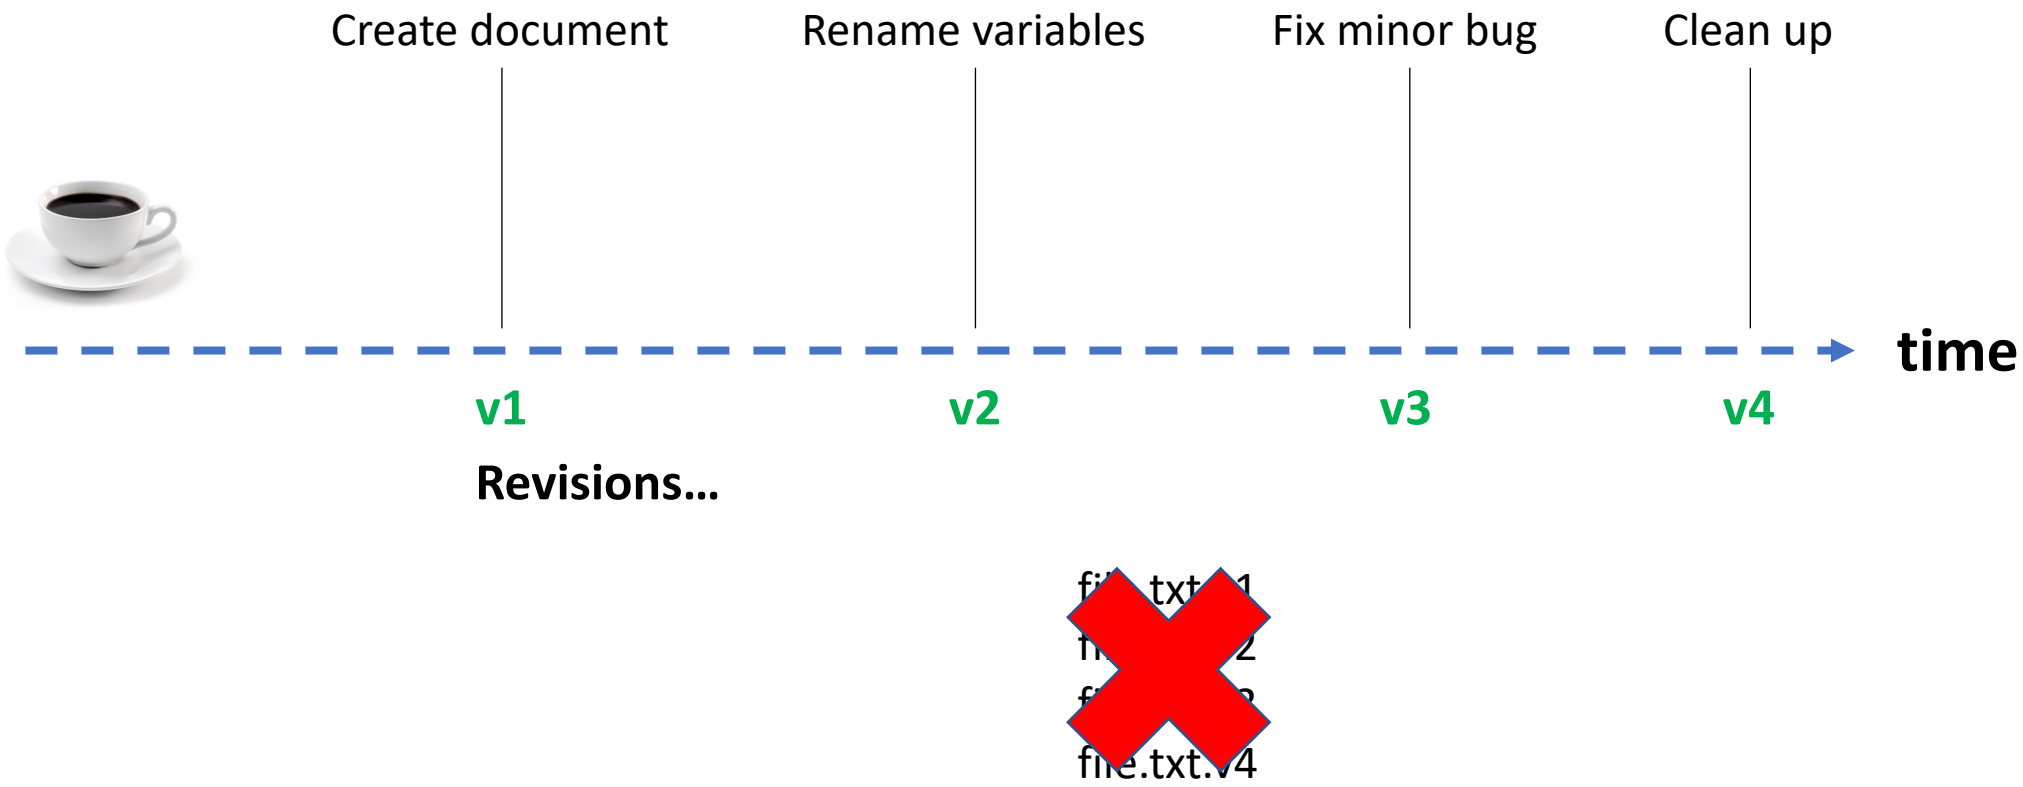
How do you handle file revisions?



Revisions…

file.txt.v1
file.txt.v2
file.txt.v3
file.txt.v4

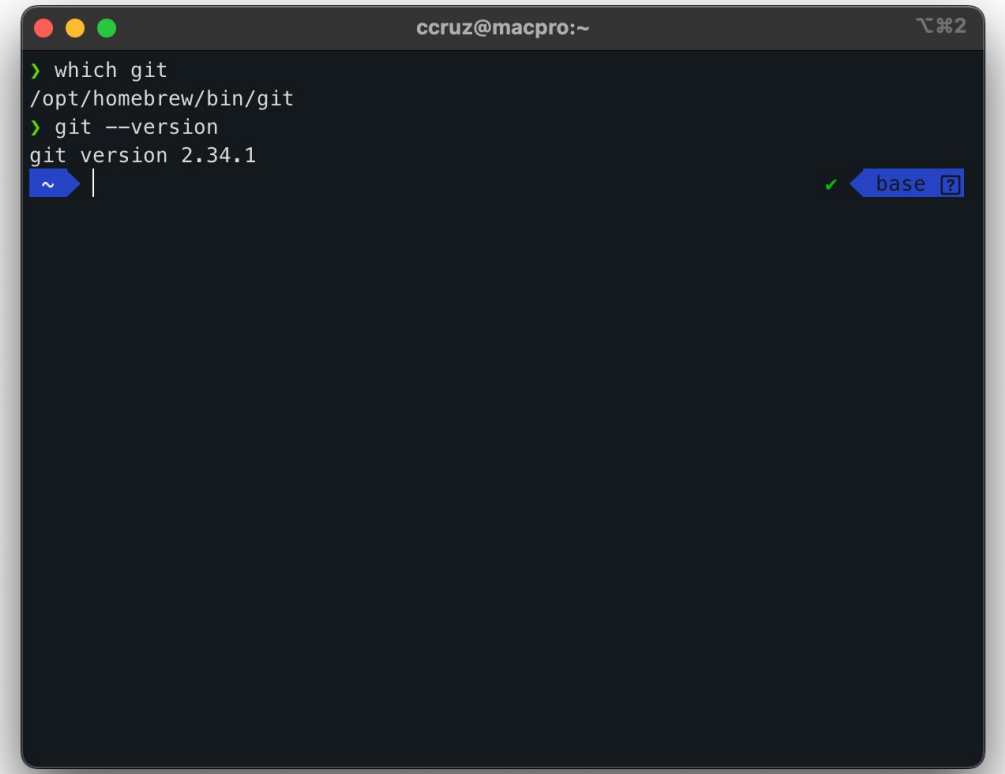
How do you handle file revisions?



Interacting with the Operating System

Shell: software layer to interact with the OS. Examples: bash, zsh, csh

CLI: Command Line Interface



Terminal: Interface for Text commands

Interacting with the Operating System

Basic commands:

Directories

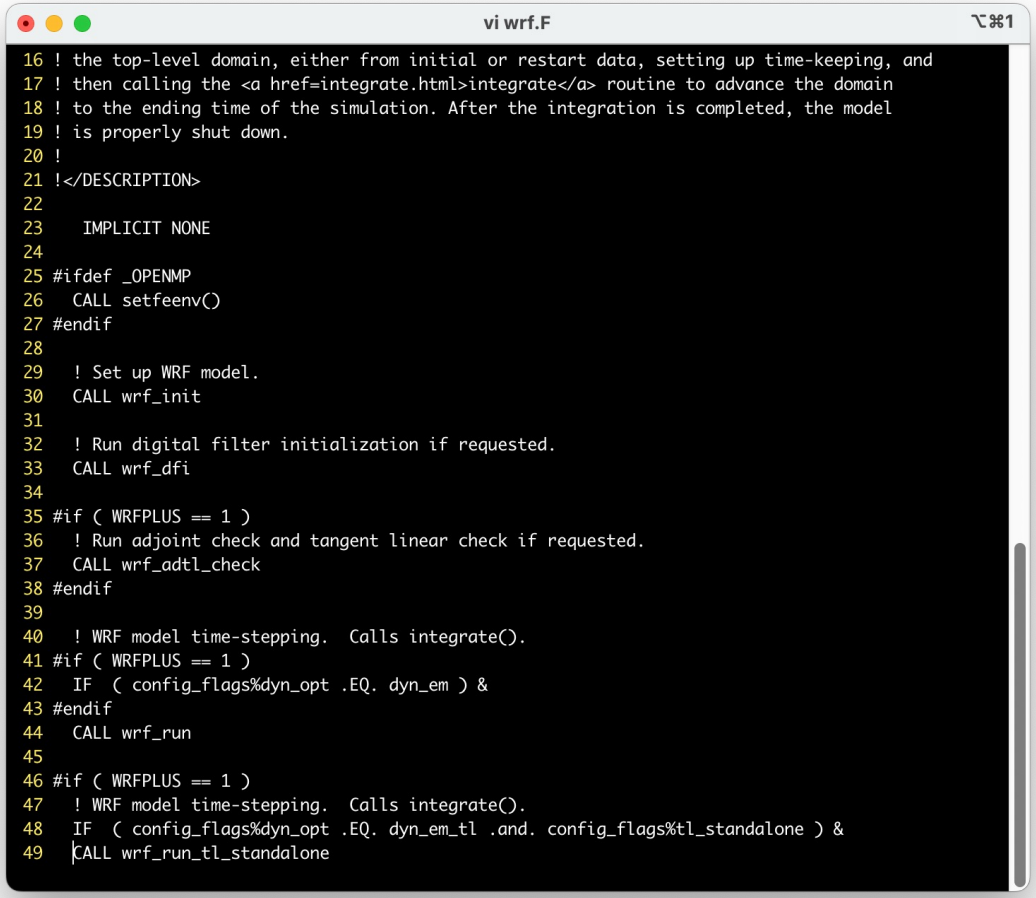
pwd : tells you where you currently are (the path)
mkdir dirname : create a new directory
cd dirname : change directory

Files

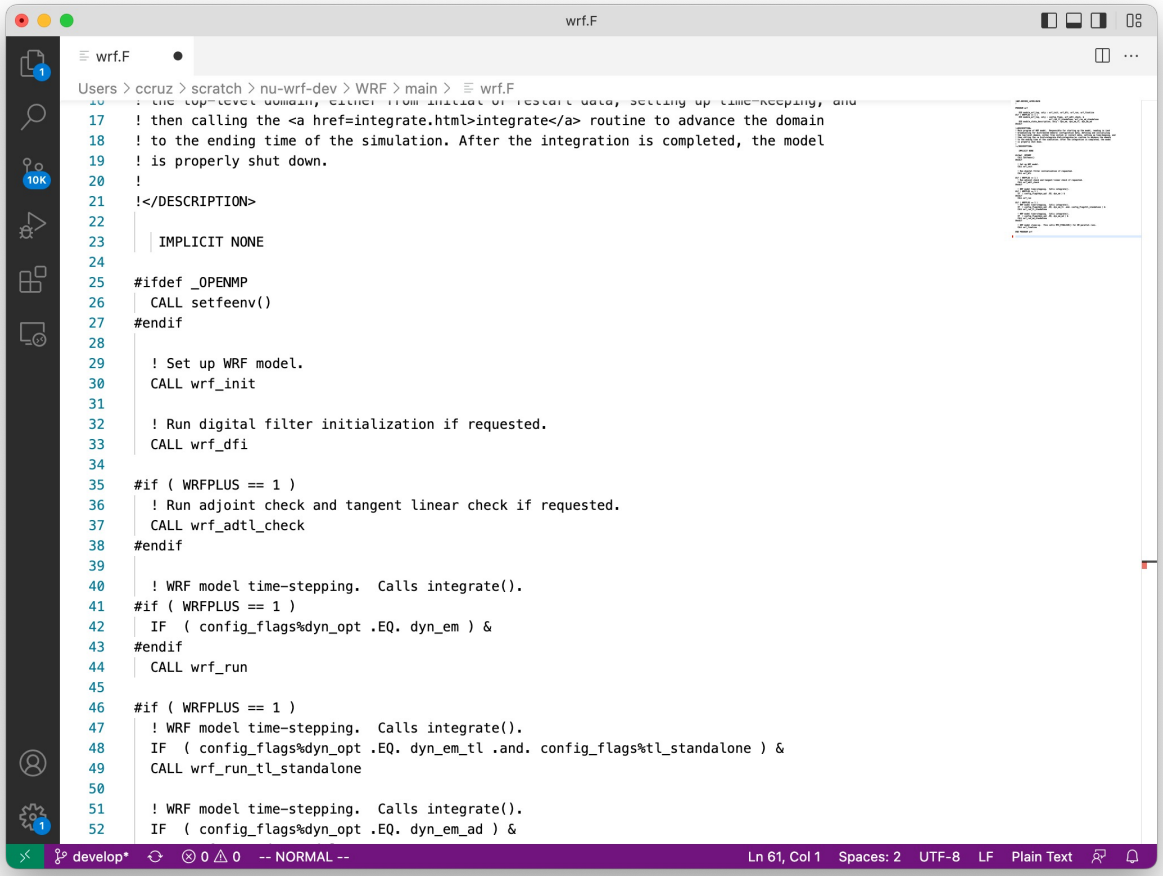
ls : list files
rm filename : remove a file
mv filename1 filename2 : rename a file
diff filename1 filename2 : compare two files
cat filename(s) : print file(s) contents
which : shows path of a command
echo : write to standard output

Creating and modifying files

Code Editor: **vim**, emacs, **nano**, IDEs,…



vim



Visual Studio

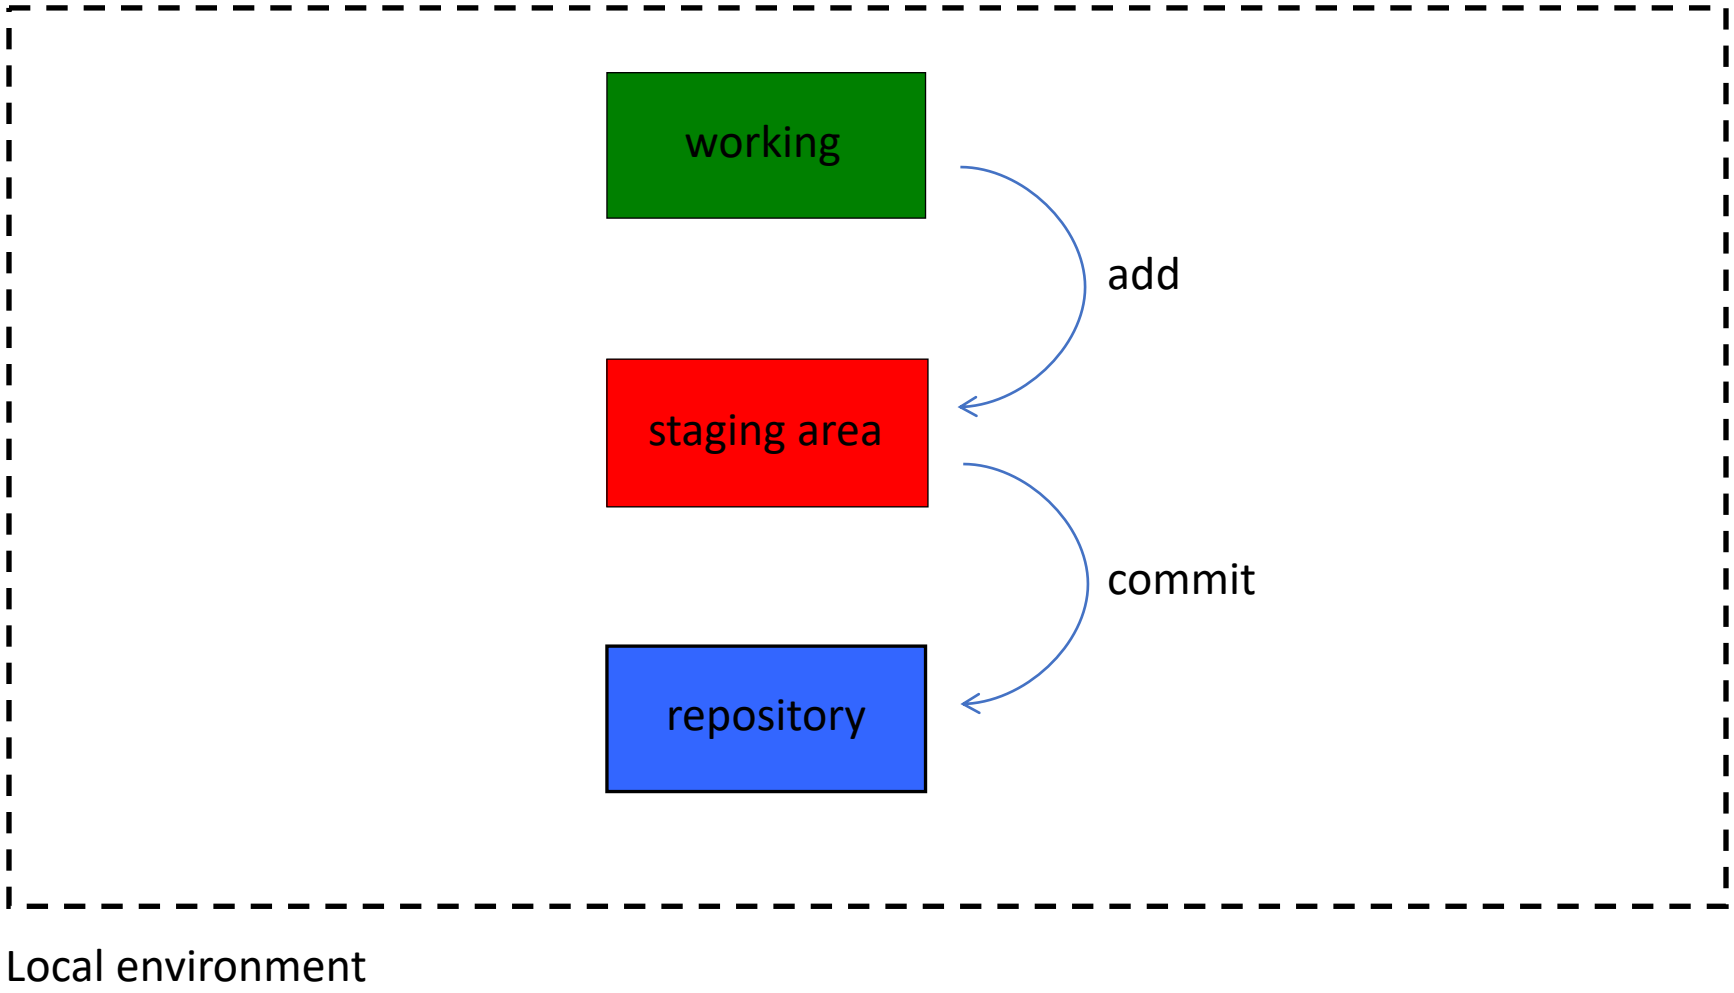
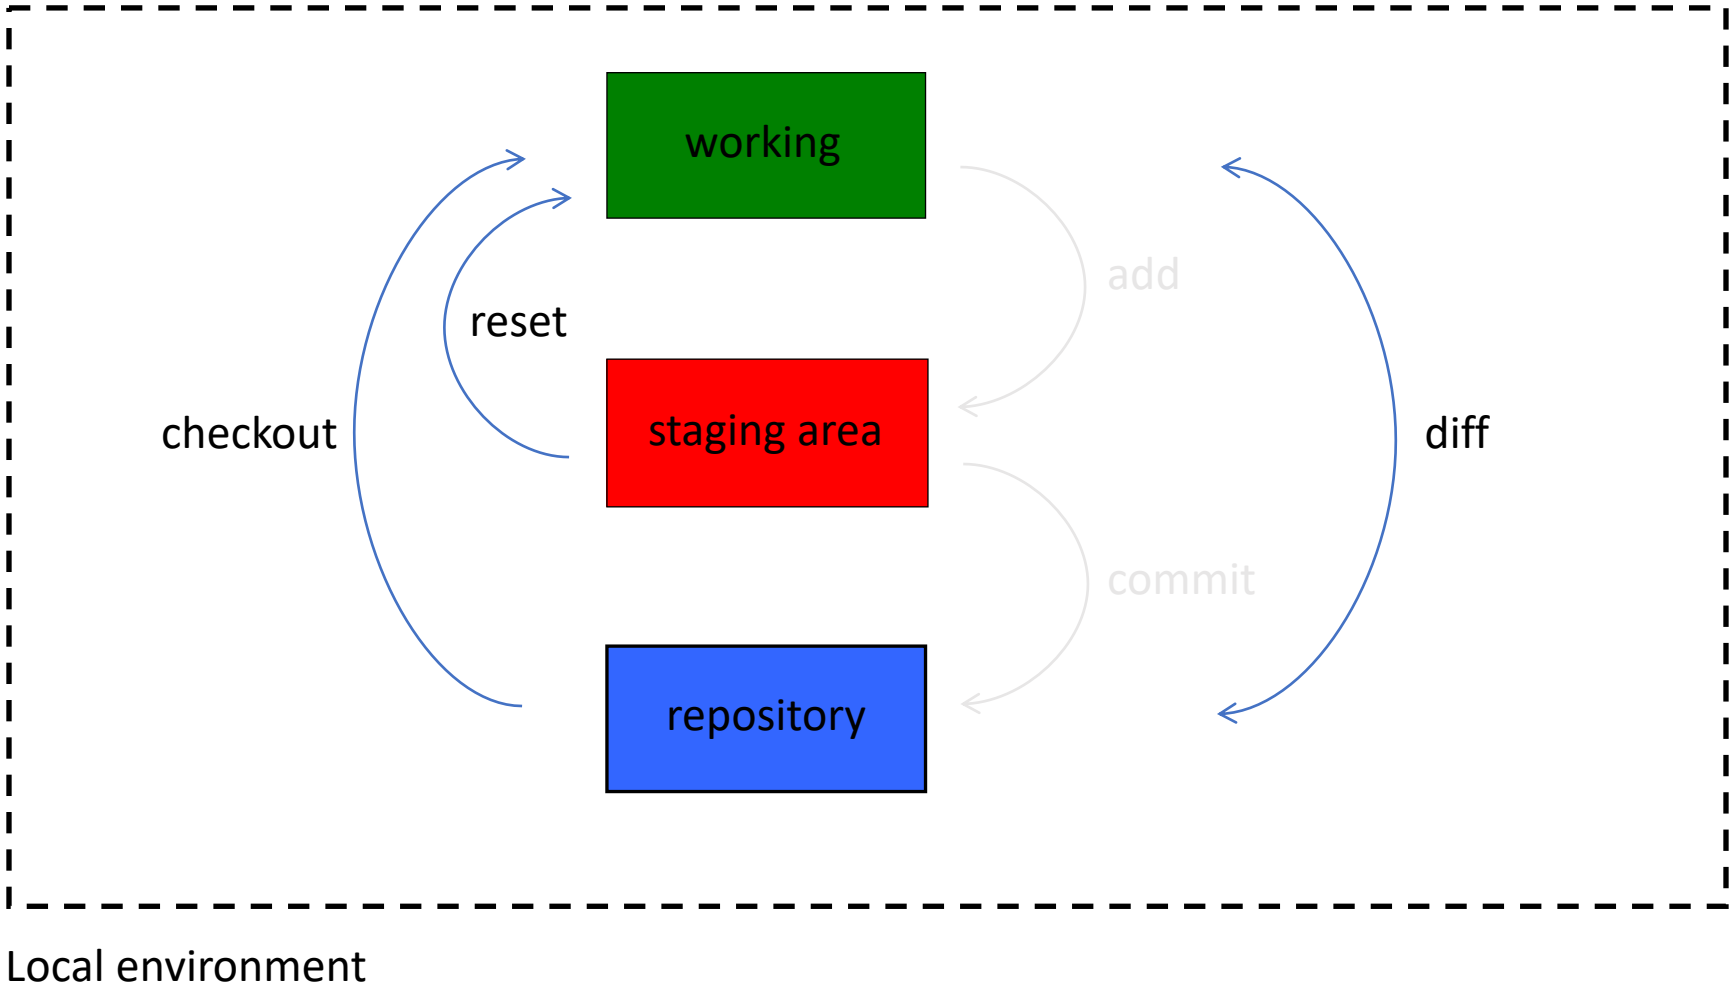
Git Workflow



Git Workflow



Git Customization

- **System:** /etc/gitconfig
- **User:** $HOME/.gitconfig
- **Project:** my_project/.git/config

Git commands to edit configuration:

git config --system (system)
git config --global (user)
git config (project)

$ git config --global user.name "[name]"

Sets the name you want attached to your commit transactions

$ git config --global user.email "[email address]"

Sets the email you want attached to your commit transactions

$ git config --global color.ui auto

Enables helpful colorization of command line output

Basic Git Commands

Create repositories

$ git init [project-name]

Creates a new local repository with the specified name

$ git clone [url]

Downloads a project and its entire version history

Make changes

$ git status

Lists all new or modified files to be committed

$ git add [file]

Snapshots the file in preparation for versioning

$ git reset [file]

Unstages the file, but preserve its contents

$ git diff

Shows file differences not yet staged

$ git diff --staged

Shows file differences between staging and the last file version

$ git commit -m "[descriptive message]"

Records file snapshots permanently in version history

Group changes

$ git branch

Lists all local branches in the current repository

$ git branch [branch-name]

Creates a new branch

$ git checkout [branch-name]

Switches to the specified branch and updates the working directory

$ git merge [branch]

Combines the specified branch's history into the current branch

$ git branch -d [branch-name]

Deletes the specified branch

Review history

$ git log

Lists version history for the current branch

$ git log --follow [file]

Lists version history for a file, including renames

$ git diff [first-branch]...[second-branch]

Shows content differences between two branches

$ git show [commit]

Outputs metadata and content changes of the specified commit
