

Version Control with Git

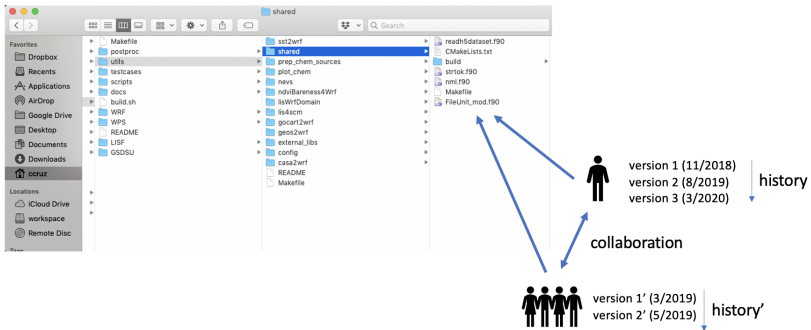

What is version control?

SIMPLY EXPLAINED

VERSION CONTROL

What is version control?

Centralized version control systems

In a central VCS there is **one** repository containing the master version (the "trunk") of the source code.

Branching

Commits are repository snapshots

Branching

A branch is a pointer to commit - not a full copy.

HEAD points to tip of current branch in repository

Branching

Can have many branches

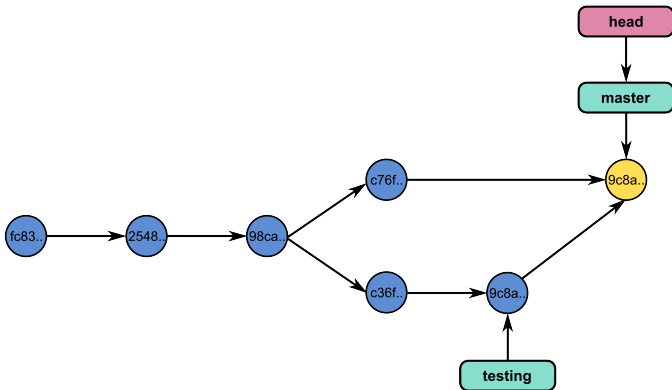

Merging

We have two branches

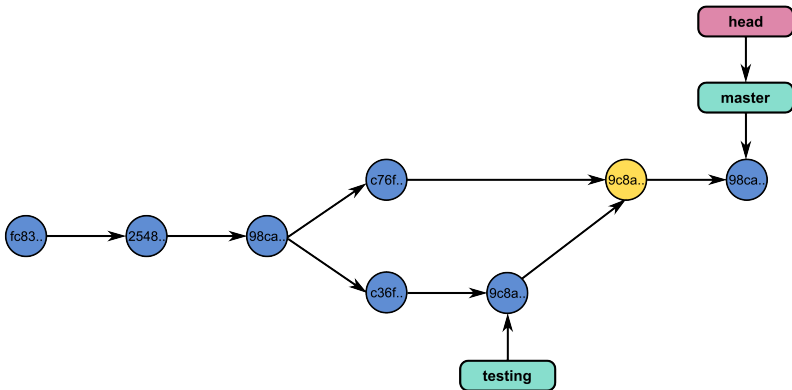

Merging

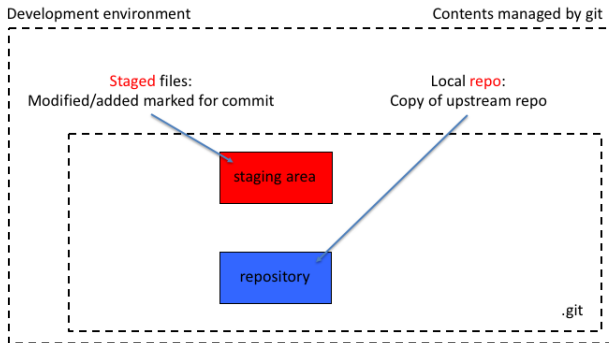

Merge testing into master
